

Cyber Security/Forensics

Description

Given the global nature of the Internet and the fundamental need to protect the integrity of information on networks, the Cyber Security/Forensics program is among the highest in demand, as are its graduates. Students will explore security issues from the standpoint of measures used to detect and distract those who attempt to access private information. They will also be introduced to the structure of networks and the Internet; how they are configured, installed, and maintained. Students will be able to troubleshoot problems and have the skills to diagnose and resolve them. This program is part of a statewide CareerTech consortium modeled after the University of Tulsa's Center for Information Security, a National Security Agency Center of Excellence. They are designed to prepare individuals to secure computer infrastructures and perform digital forensics. These students can obtain industry and government credentials while gaining practical hands-on experience. Graduates of the program will be prepared for an attractive position in industry, may take other related courses at Tulsa Tech, or opt to pursue a college degree.

- Learn current, potential threats and counter-measures used to secure networks & Internet environments
- Be a part of the statewide training consortium of Cyber & Internet security detectives
- Work closely with industry professionals to secure networks & the Internet
- Learn techniques & methods for the collection & analysis of digital evidence
- Investigate inappropriate civil & criminal cyber activity
- Learn to protect financial transactions over the Internet
