

THERE HAS NEVER BEEN A MORE CRUCIAL TIME IN THE HISTORY OF AMERICAN MANUFACTURING TO APPLY THE PRINCIPLES OF

Lean Manufacturing

No faster way to improve the bottom line ...

In order to survive in today's economy it is essential that companies remain competitive. To remain competitive manufacturers must manage their current resources to meet customer's increasing demands.

How will "Lean" keep my company competitive?

You'll learn how to reduce manufacturing cycle time up to 90%, reduce work in process up to 90%, improve quality up to 50% and reduce floor space up to 75%. Applying lean principles can save you time, and make you money thus providing you with competitive strength in your market.

What do we need to do to get started?

Attend Principles of Lean Manufacturing with Simulation. This is a "hands-on" workshop, which is limited to 18 people. There is a mix of classroom and live practical simulation with each participant working to manufacture products in a hectic and chaotic traditional manufacturing environment.

Sponsored by
